

#### Difference Between Unsigned Int and Signed Int?

- An integer in the range [-2147483648 to 2147483647] is represented by a signed integer, a 32-bit datum. A 32-bit datum known as an unsigned integer encodes a nonnegative integer in the [0 to 4294967295] range. The two's complement notation is used to express signed integers.

#### Difference between Go and Java?

- Golang is a modern language that offers better-optimized functionality and takes less time to learn, making it ideal for novices. The grammar of Go code is simpler and has fewer unused parentheses. Java, on the other hand, is a language that is object-oriented and has a large library

#### Difference between Go and Python?

- Python is an object-oriented, imperative, functional, and procedural language, whereas Go is a procedural, functional, and concurrent language. Python lacks any built-in concurrency mechanism, but Go offers concurrency.

#### Advantages of Go:

- Simplified code.
- Powerful performance.
- The go-to language for large-scale projects.
- Designed for multi-core processors.
- Designed for the internet.
- Fast garbage collection.
- Easy to learn.
- Easy maintenance.

#### Disadvantages of Go:

- It's a relatively new language with not many libraries or information.
- Its simplicity seems superficial because of its internal inconsistencies.
- With limited scope, automation can invite errors.
- It's got defective dependency management.
- It's a high-level language with low-level features.
